TOM TAT

This article examines the analysis of Vietnam's e-commerce market in the period 2020-2024, with the center being 2024 - a year that is largely mixed with a total trading value of 25 billion USD. The group uses a more advanced research method, combined with data analysis collected from VECOM, Google-Temasek and offices of 120 e-commerce enterprises. The results show that there are 5 main trends that are shaping the future of the market: luxury retail sales, live-stream sales, e-commerce that spreads around the world, artificial intelligence, and shopping malls. The final study also points out the policy and control recommendations for logistics growth which is the most important point.

Faculty: dien tuong mai, Vietnam, 2024 trend, logistics, AI, xa hoi mai

1. DAT VAN DESCRIPTION AND MUC TIEU THIEN CUU

Vietnam is emerging as one of the fastest growing e-commerce markets in Southeast Asia, with an average growth rate of 25-30%/year in the past 5 years. According to the Google-Temasek-Bain 2023 report, Vietnam's economy will reach 45 billion USD by 2025, with e-commerce taking over in the next few days.

However, this growth is due to many factors: high sales rate (15-25%), widespread price increase, unstable logistics system and limited consumer confidence. This article focuses on the analysis of opportunities and implementation, and in order to develop a policy framework for the development of comprehensive e-commerce for Vietnam until 2030.

2. OVERVIEW OF THE 2024 TRUONG TRADING EXAM

2.1. Instructions for Mo

Chi Tieu	2022	2023	2024 (Du bao)	Tang truong YoY

2.2. Xu Huong Chinh Nam 2024

- **Social Commerce:** Tiktok Shop vot moc 5 billion USD GMV in Vietnam, get 20% discount. The number of users on Facebook and Zalo will increase by 180% compared to 2022.
- **Live-stream ban hang:** Over 30,000 live-stream sessions per day on platforms. The rate of conversion from live-streaming is about 3 times higher than that of high-definition optical.
- **E-commerce spreads around the world:** The value of exporting goods through the e-commerce channel is 4.2 billion USD. Vietnamese equipment, products and fashion equipment are selected at ASEAN markets.
- **AI sings flowers:** More than 60% of e-commerce stores are deploying AI to perform professional research. The return rate increases by 35% when there is a need to produce mixed products.
- **Ben Vung Mai Mai:** People who use Gen Z products pay 10-15% more for products that are committed to every market. The investment products have an "eco badge" for people who apply for green spending.

3. SCHEDULE AND RECOMMENDATIONS

Research is needed to change the e-commerce market in Vietnam, which is growing in number but mixed with many rapidly growing markets. However, in order to increase the local market, there needs to be a consensus between government, businesses and consumers in developing a new e-commerce market in the province, the state and the area.

- (1) Complete the legal framework for e-commerce to transform the world, determine tax and tax rates. (2) Investment in developing logistics infrastructure to hot and dry areas is scarce.
- (3) Increase consumer communication about information coverage and safe purchasing online.
- (4) Develop national "green e-commerce" standards and encourage businesses to participate. (5) Establishing regulations to create digital capital for 500,000 business houses specializing in e-commerce by 2026.
