

Scanned PDF Sample

This file is an image-only PDF for OCR testing.

1. Purpose

The purpose of this sample is to check whether the system can recognize text from a scanned page before translation.

2. OCR Requirement

A scanned PDF does not contain real selectable text. The pipeline must apply OCR before converting the file to DOCX.

3. Expected Output

After OCR and translation, the exported PDF should be readable and the translated paragraphs should appear in a reasonable layout.

Input	Process	Output
Scanned PDF	OCR	Searchable text
DOCX	Translation	Translated DOCX
DOCX	Export	PDF result

Note: Slight blur and page noise are added intentionally.
